

# think green

## Green Manufacturing Process

Rinato's steps toward sustainability include both the product as well as the manufacturing process. Some of the highlights of our green conscious manufacturing process includes air filtration systems to eliminate airborne dust, day lighting and energy efficient lighting to minimize electricity and a grey water filtration system to recycle water.

### Below are some highlights of our green manufacturing efforts.

- Energy efficient lighting has reduced electricity consumption by 20%
- Water filtration system recycles 45,000 gallons of water per day
- 75% of waste from manufacturing is recycled for road base
- Since 1999, recycled 4.5 million pounds of glass across all of our terrazzo products (1/1/08)

We continually look for new ways to reduce our impact on the environment. Stay tuned for more green conscious manufacturing efforts from Rinato.
